

Codetron®

IMPORTANT INFORMATION

CODETRON is a non-invasive transcutaneous electrical stimulation unit for pain relief. It is a remarkable alternative to drug therapy for patients suffering from severe acute or chronic pain, palliative pain as well as post-operative pain.

CODETRON through six electrodes emits high intensity and low frequency electrical stimulation, which releases Endorphins, Serotonin and Cortisol from the brain spinal cord and pituitary glands.

The Codetron Unit uses random stimulation at the six electrode sites ensuring that the brain does not filter out the signals. Therefore, it prevents habituation and accommodation.

The wave form produced by Codetron is a "square" wave which will never spike. Therefore, the stimulation goes deep into the type C afferent and the patient remains completely comfortable. It is similar to acupuncture without the needles.

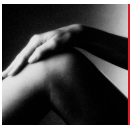

CODETRON is the most effective when the six positive electrodes are placed over the acupuncture trigger or pressure points.

The treatment regime for Codetron Therapy is 30 minutes daily. The positive effects of Codetron are the accumulation of Endorphins, Serotonin, and Cortisol within the body with each treatment.

CODETRON use is most dramatic when it allows for reduction or cessation of drugs such as Morphine, and similar addictive products.

The purchase price of the Codetron 902C unit is \$3,295.00. The unit can be rented, time purchased or directly purchased. The unit rents for \$250.00 per month.

To place a request for a unit or for further information, please **call: 1-800-274-0009** or, you may also request via **fax: 1-800-817-0049**.
